

VoucherCodes Test Engineer Task

At VoucherCodes we like to be confident in the code we deliver. To improve our confidence when deploying code we have extensive end-to-end testing.

Task Definition

We would like you to automate searching for offers in local restaurants. This should be performed using a browser automation tool such as Cypress, Puppeteer, Nightwatch, etc., use one you are familiar with - we will want to know why you chose it! URL of our website is:

www.vouchercodes.co.uk.

Requirements

- Runnable through the command line
- One test that successfully performs a search for offers in local restaurants in London, on any given day, for an given number of people.
- One test that fails (on purpose!) and will provide useful data for debugging (think logs, screenshots, videos, etc.)
- Written in JavaScript

Submission

Please provide a URL to a public repository containing your task submission. Instructions on how to run the script are useful to include.
